

### Abstract of the Disclosure

5 A web-type floor covering made of vulcanized rubber that  
includes an elastic rubber web, the top side of which  
forms a decorative surface, first decorative particles  
being at least partially embedded in the rubber web so  
that the first decorative particles are visible from the  
top side, a transparent coating, in particular made of  
epoxy resin, being applied to the first decorative  
particles on at least part of their contact surface with  
10 the rubber web, the first decorative particles being  
preferably made of a different material from that used  
for the rubber web.
